ABOUT CORTELLIS COMPANY DETAILED PIPELINE REPORT

Thomson Reuters provides the knowledge, tools, and expertise to help support drug discovery and development activities, IP portfolio optimization, identification of licensing and partnering opportunities, delivery of successful regulatory submissions, and the ability to keep current with the rapidly-changing pharmaceutical and chemical markets, supporting informed, early decisions.

This report was created by Thomson Reuters, using information from *Thomson Reuters Cortellis™ for Competitive Intelligence*; a comprehensive, proven intelligence solution that leverages the most accurate, complete, and widely respected drug pipeline information. From drug discovery and development activities to patent reports, the latest deals, and partnering opportunities, *Cortellis* can provide the confidence to make the most informed business decisions, faster. *Cortellis for Competitive Intelligence* provides accurate and validated information on pharmaceutical and biotechnology companies globally, their drug pipelines, deals, patents, and clinical trials, plus breaking industry news and conference coverage. All contained in one simple, highly intuitive research platform.

Cortellis Company Detailed Pipeline reports are the second in a series of that track pharmaceutical and biotechnology companies worldwide. All *Cortellis for Competitive Intelligence* content is subject to the most comprehensive editorial review process available, conducted by scientists, pharma professionals, regulatory experts, and generics specialists. Featuring timely drug pipeline information expertly uncovered and integrated from over 400 global meetings each year, you'll always be on top of the latest developments.

Chosen by leading life sciences companies, their executives and investors, *Cortellis for Competitive Intelligence* accelerates your deal-making and gives you timely insights on the development landscape.

Discover undiscovered opportunities in drug development and licensing faster with *Thomson Reuters Cortellis™ for Competitive Intelligence*

GLOSSARY

Number of Drugs in Active Development

Number of drugs associated with the company or subsidiary that are currently in active development, i.e. the development status for the drug(s) is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Number of Inactive Drugs

Number of drugs associated with the company or subsidiary that are currently classified as inactive, i.e. where the development status for the drug(s) is one of the following: No Development Reported, Discontinued, or Withdrawn.

Number of Patents as Owner

Number of patents associated with the company where the company is listed as owner; i.e. the relationship type (or way the patent refers to the company) is: Patent Assignee/Owner, Patent owner (not assignee), Licensee for development and marketing, Licensee – marketing only (Distributor), Patent assignee of family member, Inferred assignee.

Number of Patents as Third Party

Number of patents associated with the company where the company is listed as third party; i.e. the relationship type (or way the patent refers to the company) is: Patent assignee (not owner), Ex-Licensee for development and marketing, Ex-Licensee marketing only (Distributor), Customer of technology, Ex-Customer of technology, Patent opponent or infringer, Affiliate organization of inventor, Owner of underlying technology.

Patents summary table

This table represents a summary of the core patent coverage for this company covering Therapeutic EP, US and WO patents since 1990 only.

Number of Deals

A count of deals where the company or one of its subsidiaries is the primary company.

Key Indications

Displays top ten key indications for the company and its subsidiaries based on frequency (indications occurring with high and identical frequency are always included, and this may result in more than ten Key Indications being listed). Includes both indications associated with patents where the company is patent owner and indications associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Key Target-based Actions

Displays top ten key target-based actions for the company and its subsidiaries based on frequency (actions occurring with high and identical frequency are always included, and this may result in more than ten Key Target-based Actions being listed). Includes both target-based actions associated with patents where the company patent owner and target-based actions associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended. A target-based action is one that is associated with a target.

Key Technologies

Displays top ten key technologies for the company and its subsidiaries based on frequency (technologies occurring with high and identical frequency are always included, and this may result in more than ten Key Technologies being listed). Includes both key technologies associated with patents where the company relationship is patent owner and key technologies associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Number of Patents as Owner	0
Number of Patents as Third Party	0
Number of Deals	6
Key Indications	Cancer
Key Target-based Actions	Beta-catenin inhibitor,Focal adhesion kinase modulator,Wnt ligand inhibitor
Key Technologies	Small molecule therapeutic,Natural product

COMPANY PROFILE

SUMMARY

Verastem Inc is a biopharmaceutical company focused on discovering and developing drugs targeting cancer stem cells.

FINANCIAL

In November 2012, Verastem planned a pre-arranged personal stock purchasing plan to acquire its common stock shares. At that time, the transaction was expected to commence on December 21, 2012.

In March 2012, the company was added to the Russell 2000 index.

In November 2011, Verastem filed a registration statement for the proposed IPO of its common stock. In January 2012, the Securities and Exchange Commission declared the registration effective, and the company priced the IPO of 5.5 million shares at \$10.00 per share, with underwriters granted a 30-day option to purchase an additional 825,000 shares of common stock to cover overallotments. The shares were to begin trading on the NASDAQ global market on January 27, 2012 under the symbol "VSTM"; in February 2012, underwriters fully exercised their over-allotment option for the purchase of additional common stocks shares. Net proceeds from the IPO were approximately \$56.7 million.

In July 2011, Verastem raised \$32 million from a series B financing.

In November 2010, Verastem raised \$16 million from a series A financing.

Last Change Date	14-Nov-2012

VS-6063 DEVELOPMENT PROFILE

SUMMARY

Verastem, under license from Pfizer, is developing VS-6063 (formerly PF-4554878, PF-04554878), the lead from a program of focal adhesion kinase (FAK) inhibitors for the potential treatment of cancer including solid tumors. In December 2008, a phase I trial began ; by July 2012, the trial had been completed ; later that month, phase II study for mesothelioma was expected to be initiated in mid-2013.

Pfizer was previously developing the drug . However, by February 2012, Pfizer had discontinued development and Verastem planned to continue development in July 2012.

Pfizer was also developing PF-562271, a reversible inhibitor of FAK and Pyk2 (FAK2) kinase for the potential oral treatment of cancer.

salinomycin (cancer), Verastem DEVELOPMENT PROFILE

SUMMARY

Verastem is investigating VS-507, a formulation of salinomycin, from a Wnt/beta-catenin inhibitor program, for the potential treatment of cancer. In March 2012, VS-507 was in IND-enabling toxicology studies. At that time, the company planned to initiate clinical trials with VS-507 over the next 12 to 15 months.

Verastem, in collaboration with Eisai, is also investigating next-generation Wnt inhibitor, for the potential treatment of cancer.

VS-5584 DEVELOPMENT PROFILE

SUMMARY

Verastem, under license from S*Bio, is investigating VS-5584 (formerly SB-2343, SB-2312), the lead from a series of orally-available mammalian target of rapamycin/phosphoinositide 3 kinase (mTOR/PI3K) alpha dual inhibitor, for the potential treatment of cancer,. In July 2012, clinical development for advanced solid tumors was expected to be initiated in mid-2013.

The company is also investigating selective mTOR inhibitors for cancer.
