ABOUT CORTELLIS COMPANY DETAILED PIPELINE REPORT

Thomson Reuters provides the knowledge, tools, and expertise to help support drug discovery and development activities, IP portfolio optimization, identification of licensing and partnering opportunities, delivery of successful regulatory submissions, and the ability to keep current with the rapidly-changing pharmaceutical and chemical markets, supporting informed, early decisions.

This report was created by Thomson Reuters, using information from *Thomson Reuters Cortellis™ for Competitive Intelligence*; a comprehensive, proven intelligence solution that leverages the most accurate, complete, and widely respected drug pipeline information. From drug discovery and development activities to patent reports, the latest deals, and partnering opportunities, *Cortellis* can provide the confidence to make the most informed business decisions, faster. *Cortellis for Competitive Intelligence* provides accurate and validated information on pharmaceutical and biotechnology companies globally, their drug pipelines, deals, patents, and clinical trials, plus breaking industry news and conference coverage. All contained in one simple, highly intuitive research platform.

Cortellis Company Detailed Pipeline reports are the second in a series of that track pharmaceutical and biotechnology companies worldwide. All *Cortellis for Competitive Intelligence* content is subject to the most comprehensive editorial review process available, conducted by scientists, pharma professionals, regulatory experts, and generics specialists. Featuring timely drug pipeline information expertly uncovered and integrated from over 400 global meetings each year, you'll always be on top of the latest developments.

Chosen by leading life sciences companies, their executives and investors, *Cortellis for Competitive Intelligence* accelerates your deal-making and gives you timely insights on the development landscape.

Discover undiscovered opportunities in drug development and licensing faster with *Thomson Reuters Cortellis™ for Competitive Intelligence*

GLOSSARY

Number of Drugs in Active Development

Number of drugs associated with the company or subsidiary that are currently in active development, i.e. the development status for the drug(s) is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Number of Inactive Drugs

Number of drugs associated with the company or subsidiary that are currently classified as inactive, i.e. where the development status for the drug(s) is one of the following: No Development Reported, Discontinued, or Withdrawn.

Number of Patents as Owner

Number of patents associated with the company where the company is listed as owner; i.e. the relationship type (or way the patent refers to the company) is: Patent Assignee/Owner, Patent owner (not assignee), Licensee for development and marketing, Licensee – marketing only (Distributor), Patent assignee of family member, Inferred assignee.

Number of Patents as Third Party

Number of patents associated with the company where the company is listed as third party; i.e. the relationship type (or way the patent refers to the company) is: Patent assignee (not owner), Ex-Licensee for development and marketing, Ex-Licensee marketing only (Distributor), Customer of technology, Ex-Customer of technology, Patent opponent or infringer, Affiliate organization of inventor, Owner of underlying technology.

Patents summary table

This table represents a summary of the core patent coverage for this company covering Therapeutic EP, US and WO patents since 1990 only.

Number of Deals

A count of deals where the company or one of its subsidiaries is the primary company.

Key Indications

Displays top ten key indications for the company and its subsidiaries based on frequency (indications occurring with high and identical frequency are always included, and this may result in more than ten Key Indications being listed). Includes both indications associated with patents where the company is patent owner and indications associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Key Target-based Actions

Displays top ten key target-based actions for the company and its subsidiaries based on frequency (actions occurring with high and identical frequency are always included, and this may result in more than ten Key Target-based Actions being listed). Includes both target-based actions associated with patents where the company patent owner and target-based actions associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended. A target-based action is one that is associated with a target.

Key Technologies

Displays top ten key technologies for the company and its subsidiaries based on frequency (technologies occurring with high and identical frequency are always included, and this may result in more than ten Key Technologies being listed). Includes both key technologies associated with patents where the company relationship is patent owner and key technologies associated with drugs in active development. A drug is classified as 'active' if it features on a row (or rows) in the current development status table where the status is one of the following: Discovery, Clinical, Phase I, Phase II, Phase III, Pre-registration, Registered, Launched, or Suspended.

Key Technologies	Small molecule therapeutic,Antibiotic,Oral formulation,Biological therapeutic,Dermatological formulation,Injectable formulation,Parenteral formulation unspecified,Peptide

COMPANY PROFILE

SUMMARY

Durata Therapeutics Inc, a biopharmaceutical company, was formed in 2009 by a 5-member venture capital syndicate for the development of antibiotic programs to treat infectious diseases.

ACQUISITIONS & SPIN-OFFS

In December 2009, Durata acquired Vicuron Pharmaceuticals from Pfizer. The transaction was funded through a stock purchase by New Leaf Venture Partners, Domain Associates, Aisling Capital, Sofinnova Ventures and Canaan Partners. Durata obtained rights to dalbavancin and two undisclosed preclinical antibiotic programs.

FINANCIAL

In March 2012, Durata planned to conduct an IPO; in July 2012, the company priced 7.5 million shares of common stock at \$9 each. The underwriters were granted 30-day option to purchase additional shares up to 1.125 million and the offering was expected to close on July 24, 2012. The company also reported that the shares would be traded on NASDAQ under the ticker symbol 'DRTX'; later that month, the IPO of 8.625 million common stock shares was closed before the underwriting discounts. By that time, a registration statement relating to these securities had been declared effective by the SEC; by September 2012, net proceeds of \$73.9 million had been raised from the offering.

dalbavancin DEVELOPMENT PROFILE

SUMMARY

Durata Therapeutics, following its acquisition of Vicuron Pharmaceuticals (previously Versicor) from Pfizer, is developing dalbavancin (Zeven; Exulett; BI-397), a semisynthetic derivative of the natural glycopeptide A-40926 for the potential once-weekly iv treatment of complicated skin and soft tissue infections (cSSTI) caused by Gram-positive bacteria, including methicillin-resistant *Staphylococcus aureus* (MRSA),.

In December 2004, Vicuron filed an NDA for cSSTI. An MAA was filed in July 2007 . However, in September 2008, Pfizer reported that it would withdraw its MAA and NDA and conduct an additional phase III trial, following feedback from regulatory authorities. Pfizer divested the drug to Durata in 2009. In April 2011, Durata began a phase III trial for acute bacterial skin and skin structure infections (abSSSI). In September 2012, the company planned to file the NDA in 1H13.

The drug was previously being investigated for the treatment of catheter-related bloodstream infections. By January 2004, phase II trials had been completed ; however, in April 2006, Pfizer stated that it had no intention to conduct a phase III trial for this indication.

dalbavancin SALES AND FORECASTS COMMENTARY

CONSENSUS SALES INFORMATION

No Consensus forecast data for Durata Therapeutics are currently available.

REGIONAL DEVELOPMENT AND MARKETING RIGHTS

In January 1999, Versicor Inc gained North American marketing rights from Biosearch Italia [311500]. In March 2003, Biosearch merged with Versicor to form Vicuron Pharmaceuticals [483671], and in June 2005, Pfizer acquired Vicuron, gaining dalbavancin development and marketing rights [480469], [607651]. In December 2009, Durata Therapeutics acquired Vicuron from Pfizer [1065287].

RaQualia Pharma (a spin-out of Pfizer) obtained the rights to dalbavancin in Japan from Pfizer in 2008. In December 2010, RaQualia Pharma signed a licensing agreement with Durata, granting Durata Japanese development and commercialization rights, meaning Durata owns full marketing rights worldwide [1170686], [1178040].

lincosamide antibacterials, Durata DEVELOPMENT PROFILE

SUMMARY

Durata Therapeutics, following its acquisition of Vicuron Pharmaceuticals (previously Versicor) from Pfizer, is investigating a series of lincosamide antibiotics for the potential treatment of bacterial infections. In August 2011, development was ongoing.

Vicuron Pharmaceuticals was previously investigating VIC-105555 (VIC-5555), a lead from the series of lincosamide antibiotics for bacterial infections. In September 2004, Vicuron expected VIC-105555 to enter clinical trials in the first half of 2005 ; however, no further development was reported since the aquisition of Vicuron by Durata.
